Against Crypto Scams

The crypto market has been flooded with fake and fraudulent projects that, instead of presenting innovations, mislead unsuspecting investors out of their money with lies.

Cryptocurrency owners understandably may have a rightful need for help and support along their journey on this rocky road. That's why we consider our mission is to demonstrate that the crypto world is not just a ground for scammers but a unique place where real innovations are being born. This is a place, where we can be part of the revolutionary transformation of the entire financial sector, while building a fairer world.

However, for improvements in this sector, it needs to go through a purifying process. The participants of the crypto world cannot tolerate acts of scammers or con artists among their ranks. The crypto world cannot be corrupt; it must be transparent. To achieve it, the sector needs platforms and communities working for this goal.

**CryptoScan is building such a platform and community.**

Our Mission

Cryptocurrencies should meet several criteria in order to set up the basis for a fair, functioning, and sustainable financial system. These include real decentralized operation, transparency, and community control. Unfortunately, the majority of tokens launched in huge numbers don't meet these criteria, and even worse, they don't want to do this. In fact, they aim to do the opposite.

Our mission is to change this trend and counterbalance these negative effects. We believe in creating a fair, understandable, and transparent crypto culture, which is profitable for everyone. To achieve this, we need the opportunities provided by technology to prevent these misuses and rely on the community – that means we rely on You!

The transparent and public nature of the blockchain technology, which constructs the basis of cryptocurrencies, allows us to monitor and trace the created crypto assets and their transactions, as well as any events occurring on the blockchain. Consequently, we can analyse past occurrences, identify suspicious activities, and draw conclusions for the future.

The CryptoScan ecosystem and platform is designed to automatically perform this task for the community.
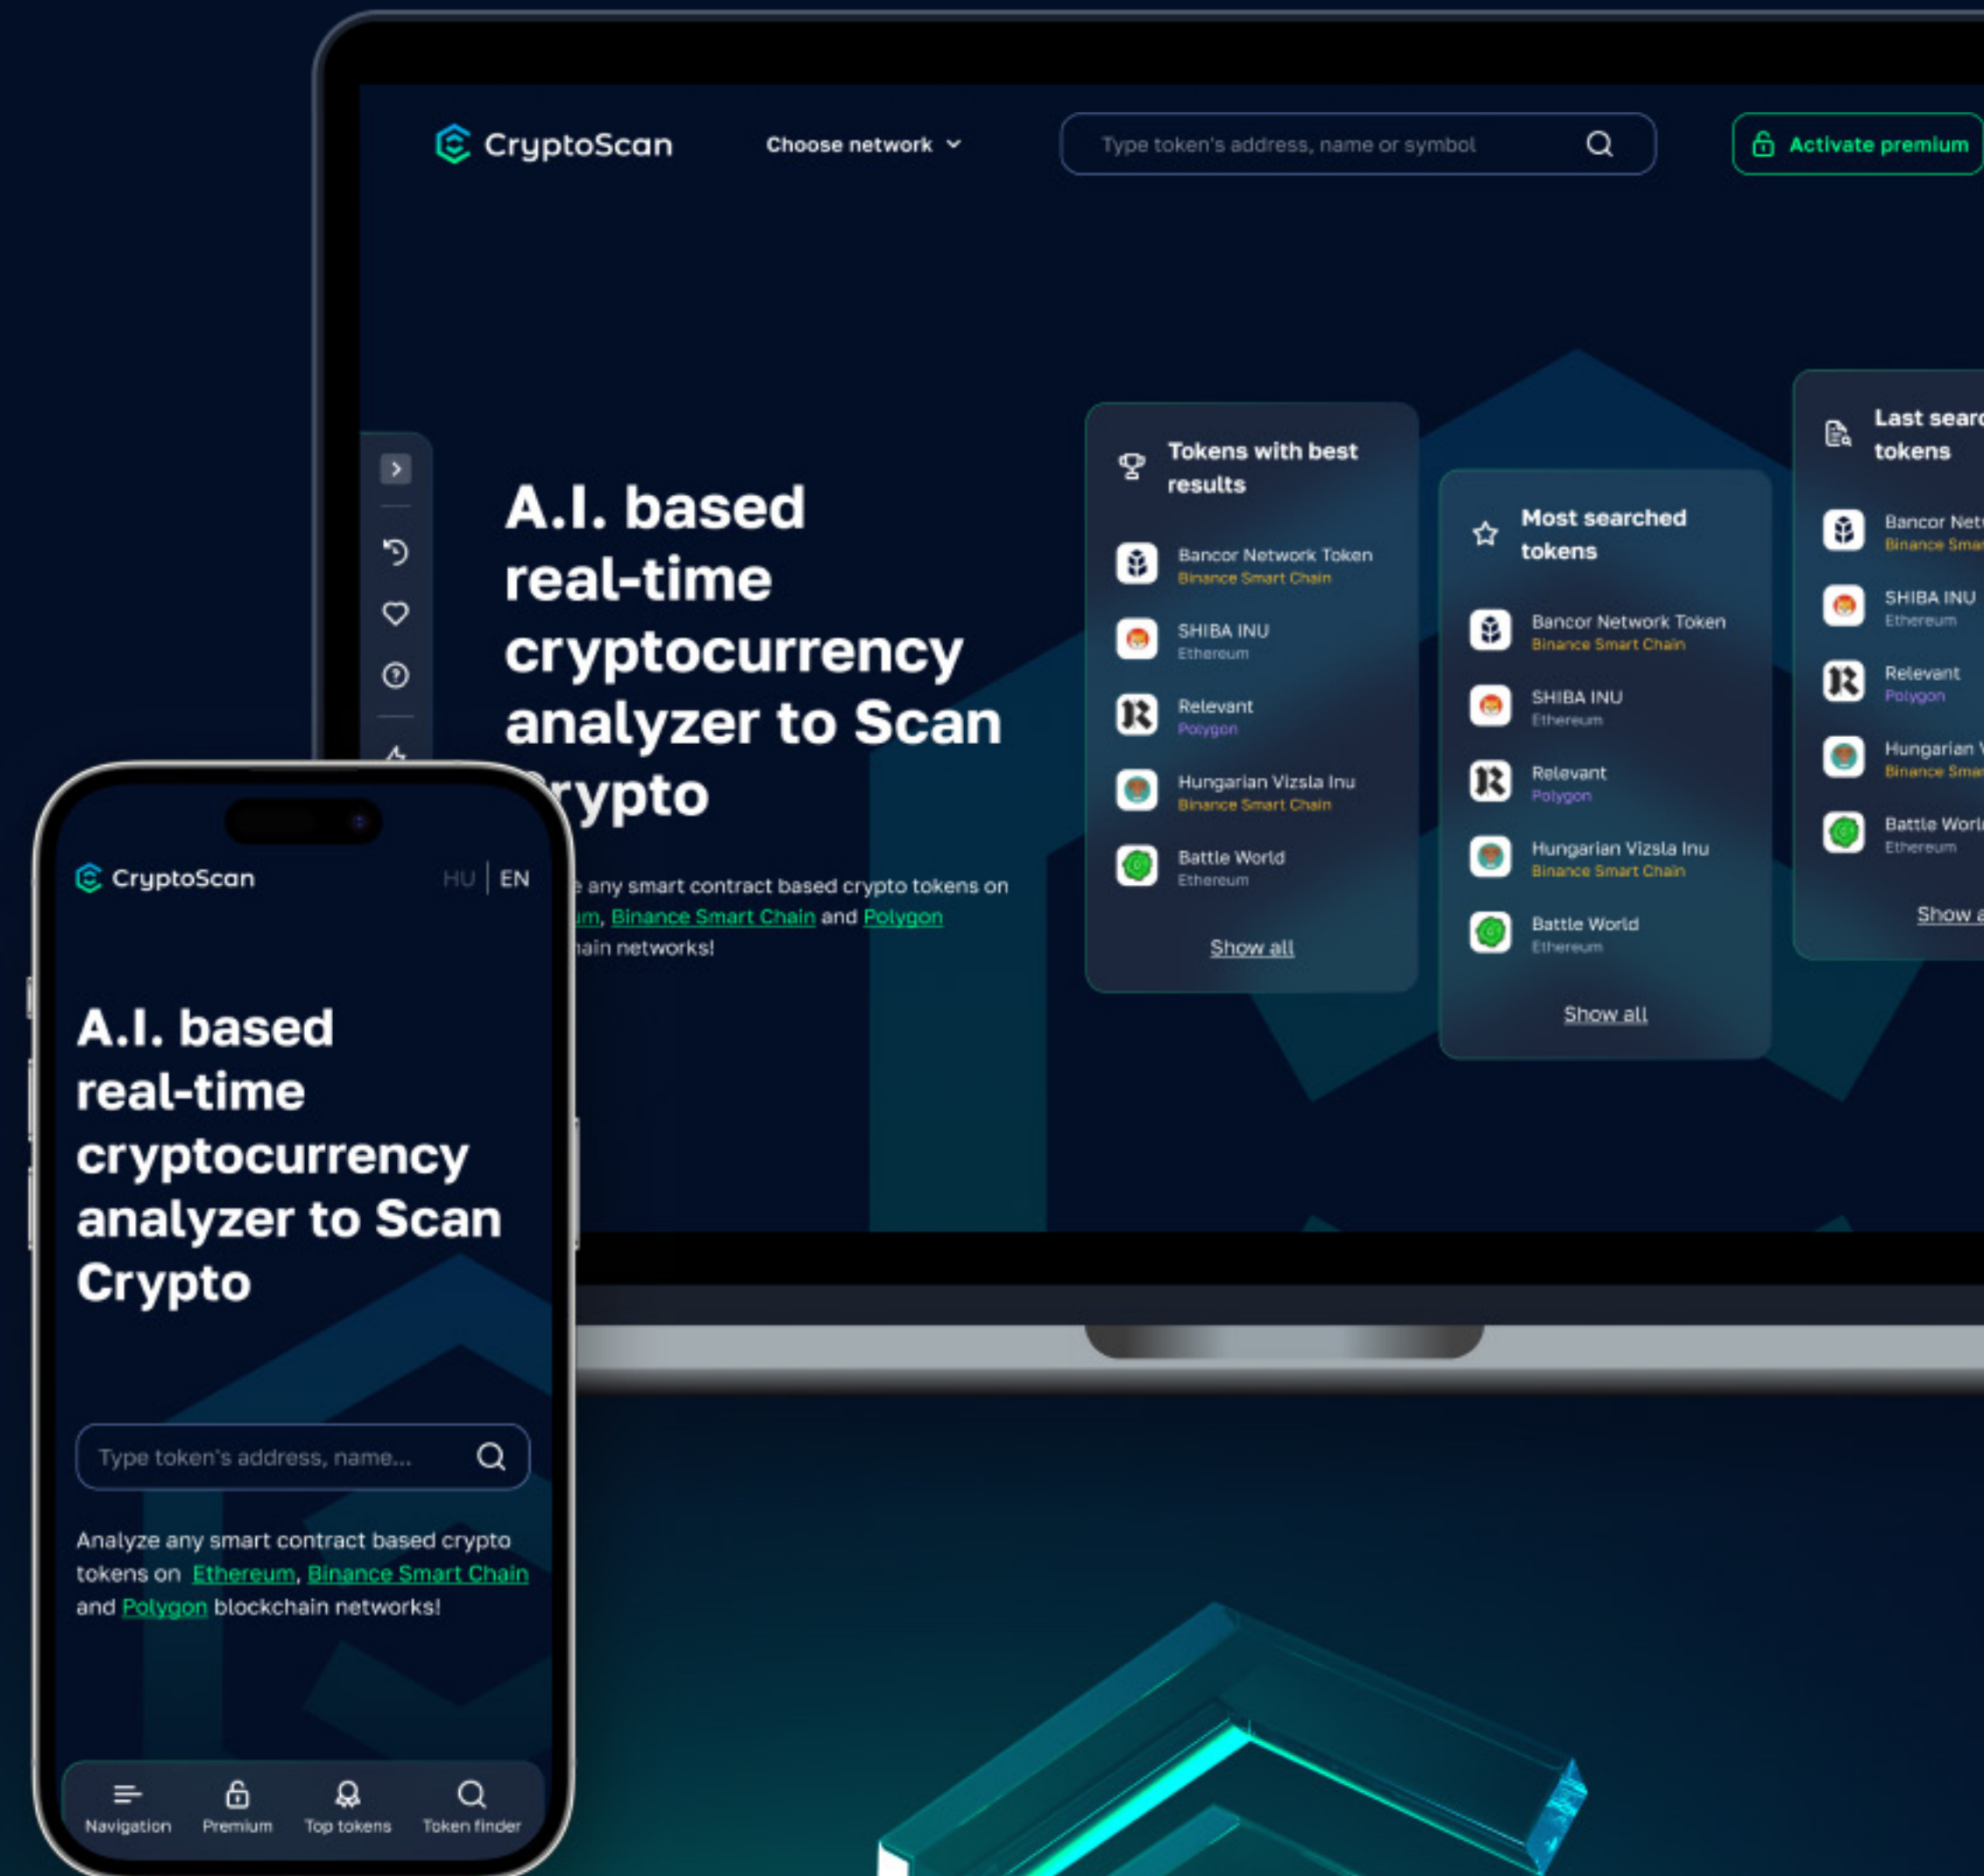

Keystones of Cryptoscan

Validation

⚠️ **Challenge:**

Nowadays, the majority of smart contract-based tokens, can be made, "created," written, or generated by almost anyone, without any innovation or added value. Often such tokens are expressly created with the intention of fraud and of damaging others.

☑️ **Solution:**

The main goal and task of the CryptoScan service is validation, real-time monitoring, and uncovering of hidden traps of these coins and tokens. This enables the detection and later prediction of potential scams. CryptoScan protects unsuspecting investors this way.

Education

⚠️ **Challenge:**

Despite, the crypto world is built on incredibly complex and sophisticated technological solutions, which are accessible to almost anyone, these "under the hood" technologies, are often unfamiliar even to experts. Therefore, no wonder when the average users and investors struggle alone to navigate this world, expose themselves to the dangers of deception, manipulation, and the advice of "false experts".

☑️ **Solution:**

The goal of the CryptoScan service and community is to assist less experienced users and investors. CryptoScan will educate them to better understand and navigate through the lies and deceptions of the crypto world. The platform provides unique, interactive token analyses, allowing for the average user to understand, what is truly behind the tokens.

Mutual support

⚠️ **Challenge:**

Unfortunately, victims of crypto scams, which is increasing day by day, can't count on any help and can only chase after their money. There is no procedure through which they could recover their money or get legal remedy.

☑️ **Solution:**

The CryptoScan ecosystem supports those crypto victims who have fallen prey to fraud or misuse in the crypto world. We create the mutual solidarity within the CryptoScan community, by means of which we provide support to the affected individuals, thereby counterbalancing the negative effects.

How are we different?
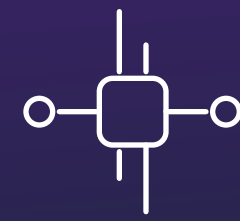

Already Functioning Services

Unlike most of the projects, we don't publish empty promises; instead, we offer several already functioning services to the community.

Real-time Analysis

We can verify any crypto token which based on smart-contract, and deployed on the three largest and most popular platforms: Ethereum, Binance Smart Chain (BNB), and Polygon.

Artificial Intelligence

The CryptoScan validation solution is based on artificial intelligence algorithms. These state-of-the-art AI-based fraud detection mechanisms are built into the CryptoScan ecosystem in an integrated way. This complex ecosystem is being built continuously by the community through their validations and analyses.

Real-time Search Engine

Any Ethereum-compatible token can be instantly searched, moreover even most recently created and blockchain-deployed cryptocurrencies can be verified on the supported networks.

Education and Solidarity

The CryptoScan ecosystem directly and indirectly supports users, beginners, and advanced alike. The CryptoScan helps them to navigate in the crypto world more easily, and to gain a deeper understanding of the underlying processes. These educational contents help to acquire real knowledge in this innovative financial world.
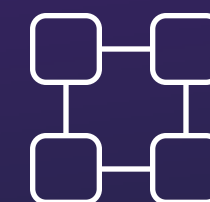

Community in Focus

Users of CryptoScan contribute to its evolution, operation, the progress of AI-based fraud detection, and support for crypto victims. Meanwhile they learn and improve themselves, and help others to navigate in the maze of the crypto world.

Available plans

Standard plan
Basic services

- **For beginners in crypto**

- Real-time token analysis and search engine

- Public token lists without searching

- Artificial intelligence based fraud detection

- CryptoStory educational contents

Premium plan
1 000 CSC holding

- **For crypto investors**

- All features from the Standard Plan

- Token lists for investors without searching

- Artificial intelligence based potential calculation

- Participation in crypto solidarity

Enterprise plan
10 000 CSC holding

- **For crypto issuers**

- All features from the Premium Plan

- Token audit in test phase, before crypto release

- Token template generator based on our standards for developers
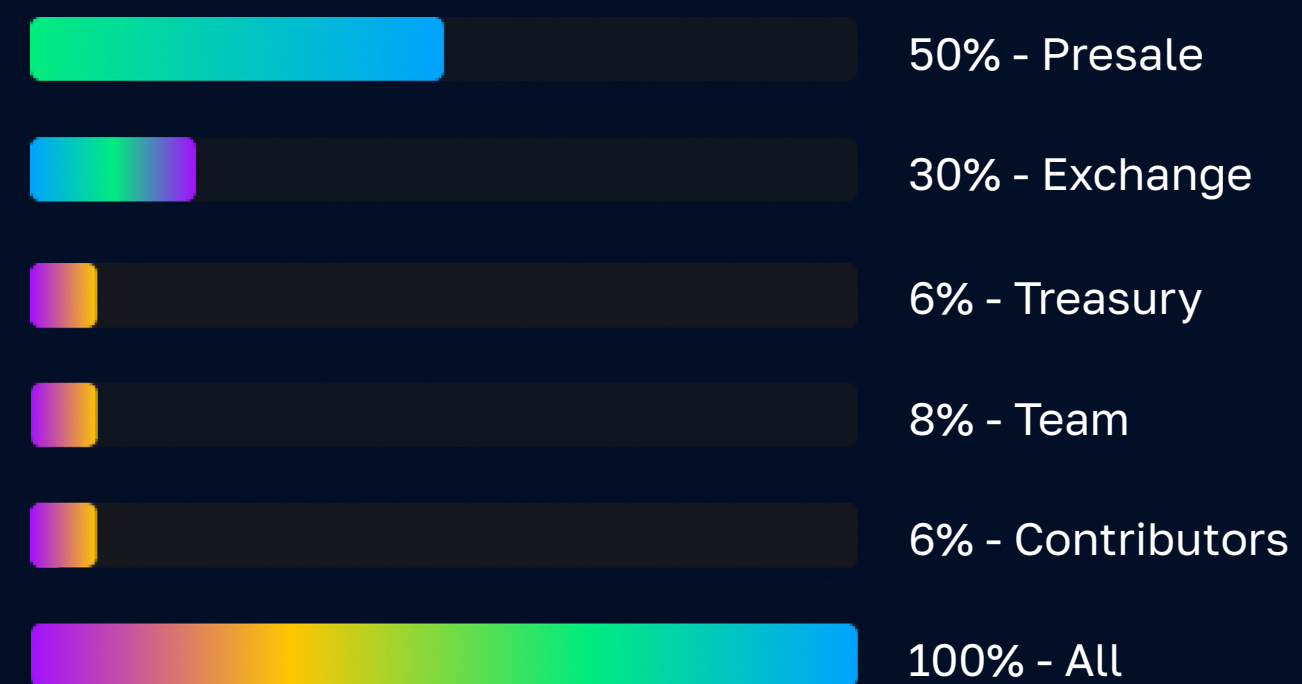

- CryptoScan NFT token for featured token list
